

HermanMiller  
Lino®

At the nexus of comfort and value

**Lino**  
Designed by Sam Hecht and Kim Colin

Lino brings scientifically backed comfort and a wide range of aesthetic options to your workplace or home. Charged with designing a high-performance work chair at an exceptional value, award-winning designers Hecht and Colin found inspiration in constraint. Thanks to their design prowess and our ergonomic expertise –

including our patented PostureFit technology – Lino joins our portfolio of high-performance work chairs. At Herman Miller, we think everyone should enjoy good design and comfort while they work, and Lino helps make that possibility a reality.

## Performance

Leaning on more than 50 years of Herman Miller's industry-leading research and design, Lino holds the same DNA as the rest of our performance work chairs, offering each person balanced movement and dynamic fit. Its contoured seat works together with its high-performance suspension to give you total spinal support, and the breathable suspension features integrated lumbar support thanks to a composite of different thread tensions.

## Design

Lino marries the design expertise of Sam Hecht and Kim Colin to the comfort you'd expect from a Herman Miller task chair. It has been made to our highest quality standards and rigorously engineered, tooled, and tested. That attention to detail is also apparent in the chair's minimal environmental impact. Lino is backed by our 12-year, 3-shift warranty.

Lino's proprietary Duo suspension material features three breathable zones of varying tension to provide thoracic, lumbar, and sacral support.

Customise your Lino Chair by choosing between a Black or Mineral frame, six different suspension colours, and a large variety of upholstery options. For the base, choose a colour that matches the frame or, for a sleeker look, turn to polished aluminium.

## About Sam Hecht and Kim Colin

Designers Sam Hecht and Kim Colin of London-based Industrial Facility create work that balances the need to live a full life with the desire to keep things simple. British-born Hecht's contemplative approach and attention to detail complements California-born Colin's architectural sensibility; together they design furniture and products that relate to the landscapes where they are used.

Colin says, "We strive for simplicity of use that is not to the detriment of good functionality." Hecht adds, "What comes out of it is a kind of equilibrium where products are relevant and lasting."
